

RelativePitch

The RelativePitch App from Easy Ear Training grown from software developed for personal use, into one of the most well received music apps available in the Apple App Store. Ear training, a necessary skill in the music industry, is used by musicians and audio professionals to recognize and identify chords, intervals, rhythms and other fundamental elements of music. Designed to help musicians and audio professionals to get the most benefit from their ears, RelativePitch makes ear training effective, accessible and fun.

The premier music training app in the Apple App Store, featured for two weeks in November 2009.

RelativePitchLite

Version: 1.6

Downloads: 36,500 since 26th May 2009

Reviews: 1500+ ratings: 3.5 stars

First released: May 2009

Features

- Train anywhere - don't be tied to your PC or instrument
- Easy and fun way to train your relative pitch (e.g. intervals, chords, scales)
- Highest rated interval training for the iPhone
- Works for any type of instrument
- Voice narrated - train your ears without using your eyes

What will you learn?

- Compose and improvise freely
- Hear each note, not just the overall sound
- Recognize intervals better - understand what you're hearing
- Enjoy music much more as your ears develop

A Guided Tour of the App

Training mode

Is made up of 14 lessons, which start from the very basics and gradually teach you all the intervals of the octave.

Depending on your achievements in testing mode, you can choose to train with a fixed root note, or randomly-chosen root notes.

You can also choose to include ascending, descending or harmonic intervals.

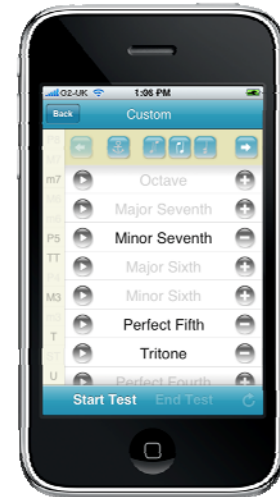

Testing mode

Features the same lessons as training mode, but quizzes you by playing intervals and asking you to identify them.

As your scores improve, more lessons unlock to teach you additional intervals.

You can also unlock random root notes, descending and harmonic intervals for each lesson.

Custom mode

Lets you select exactly which intervals you want to train or test, to target your problem areas.

Struggling with a lesson? Use custom mode to tweak it to suit you, so you can continue training at your own pace.

Experts can use custom mode to jump straight to what they know needs work.
